AWT Assignment – 5

Name: Payal Makwana

Enrollment no.: 92301733057

I built a simple todo-app using React.

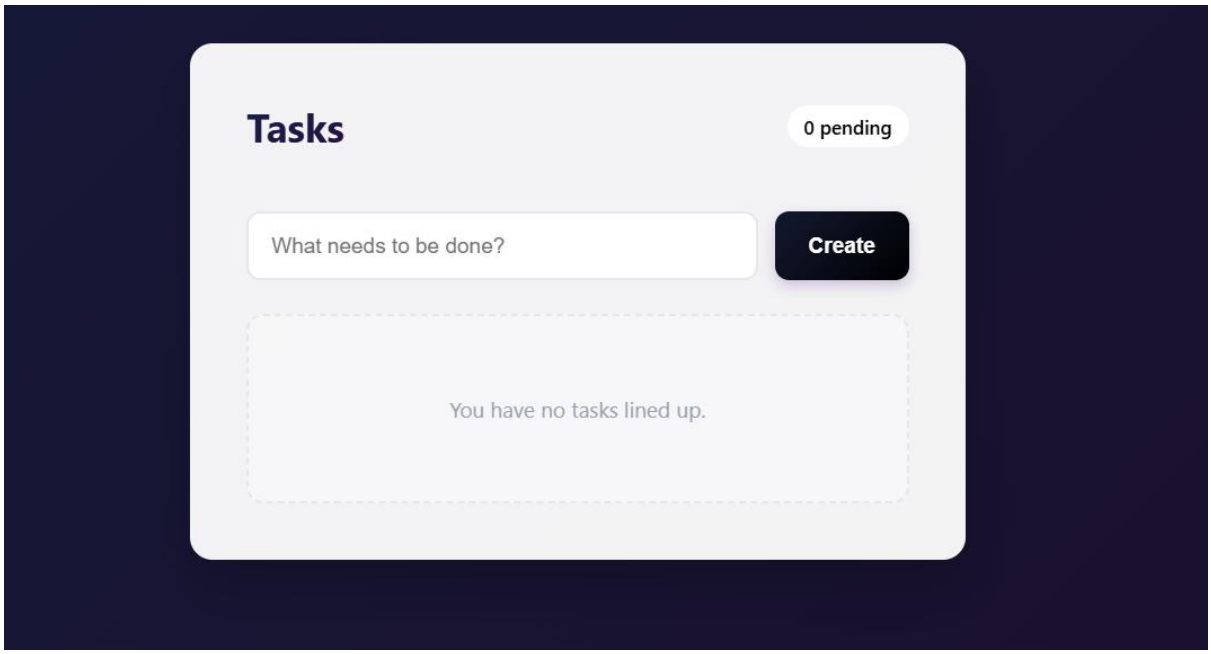
Deployed link: https://todo-app-payal-mak.web.app/

Steps to build this React app:

npm create vite

cd todo-app

npm i



Steps to deploy this project on Firebase:

Install the Firebase CLI tools:

npm install -g firebase-tools

then login to your Firebase account

firebase login

Then initialize Firebase in your project

firebase init

Select these options:

Select **Hosting: Configure files for Firebase Hosting.**
Create a new project and press Enter.

Then it will ask for unique id, then type any **unique id** which you want

Then it will ask for a name which you can call it, type the **name** you want

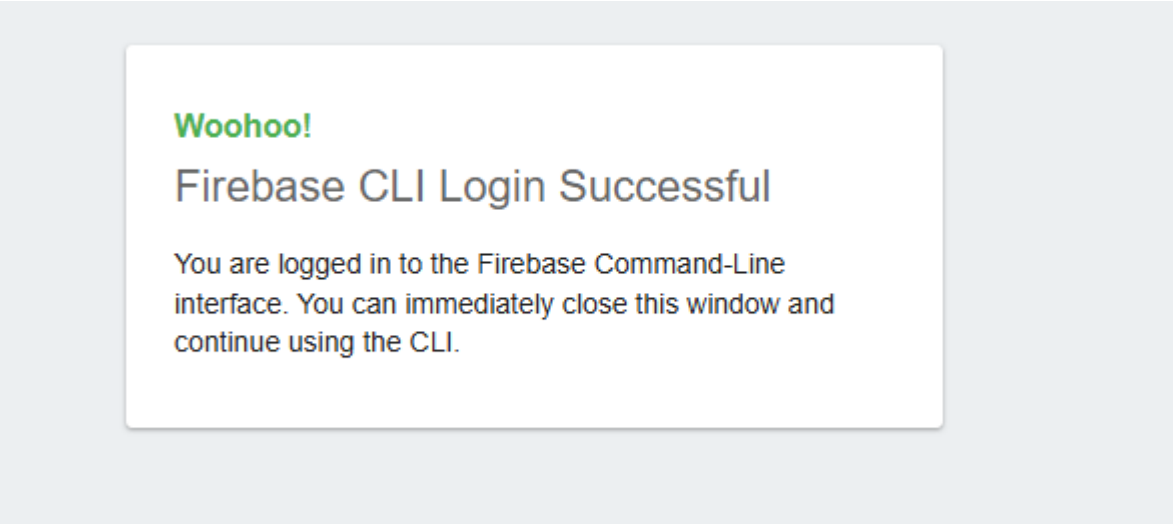
Then continue with the rest of the setup like, for this project,

Public directory: dist, Single-page app: yes, Github: no

Then do:

npm run build

firebase console



```
+  Success! Logged in as iampayal018@gmail.com
PS D:\SEM 6\AWT\AWT_Codes\assignment-5_57\todo-app> firebase init

     ######## #### ########  ######## ########     ###     ######  ########
     ##        ##  ##     ## ##       ##     ##  ##   ##  ##       ##
     ######    ##  ########  ######   ########  #########  ######  ######
     ##        ##  ##    ##  ##       ##     ## ##     ##       ## ##
     ##       #### ##     ## ######## ########  ##     ##  ######  ########

You're about to initialize a Firebase project in this directory:

  D:\SEM 6\AWT\AWT_Codes\assignment-5_57\todo-app

✓ Are you ready to proceed? Yes
? Which Firebase features do you want to set up for this directory? Press Space to select features, then
Enter to confirm your choices.
❯◯ SQL Connect: Set up a Firebase SQL Connect service
 ◯ Firestore: Configure security rules and indexes files for Firestore
 ◯ Genkit: Setup a new Genkit project with Firebase
 ◯ Functions: Configure a Cloud Functions directory and its files
 ◯ App Hosting: Set up deployments for full-stack web apps (supports server-side rendering)
 ◯ Hosting: Set up deployments for static web apps
 ◯ Storage: Configure a security rules file for Cloud Storage

```

```
   - Project ID: todo-app-payal-mak
   - Project Name: todo-app

Firebase console is available at
https://console.firebase.google.com/project/todo-app-payal-mak/overview

=== Hosting Setup

Your public directory is the folder (relative to your project directory) that
will contain Hosting assets to be uploaded with firebase deploy. If you
have a build process for your assets, use your build's output directory.

✓ What do you want to use as your public directory? dist
✓ Configure as a single-page app (rewrite all urls to /index.html)? Yes
✓ Set up automatic builds and deploys with GitHub? No
+  Wrote dist\index.html

=== Agent Skills Setup
If you are using an AI coding agent, Firebase Agent Skills make it an expert at Firebase.
✓ Would you like to install agent skills for Firebase? Yes
i  Installing Agent skills in the background...
+  Agent skills installation started

+  Wrote configuration info to firebase.json
+  Wrote project information to .firebaserc

+  Firebase initialization complete!
```

```
PS D:\SEM 6\AWT\AWT_Codes\assignment-5_57\todo-app> npm run build

> todo-app@0.0.0 build
> vite build

vite v6.4.2 building for production...
✓ 30 modules transformed.
dist/index.html                   0.46 kB │ gzip:  0.29 kB
dist/assets/index-C3dRdxpL.css    3.03 kB │ gzip:  1.12 kB
dist/assets/index-D7FKE2Oc.js   196.68 kB │ gzip: 61.59 kB
✓ built in 1.03s
PS D:\SEM 6\AWT\AWT_Codes\assignment-5_57\todo-app> firebase deploy

=== Deploying to 'todo-app-payal-mak'...

i  deploying hosting
i  hosting[todo-app-payal-mak]: beginning deploy...
i  hosting[todo-app-payal-mak]: found 4 files in dist
+  hosting[todo-app-payal-mak]: file upload complete
i  hosting[todo-app-payal-mak]: finalizing version...
+  hosting[todo-app-payal-mak]: version finalized
i  hosting[todo-app-payal-mak]: releasing new version...
+  hosting[todo-app-payal-mak]: release complete

+  Deploy complete!
